

## Nepřekonatelná spolehlivost a rychlost instalace

Železobetonové rámové propustky IZM-S jsou vyráběny v jednom pracovním kroku pomocí samozhutitelných betonů. Disponují variabilitou rozměrů, které jsou k dispozici v krocích po 100mm, od minimálního rozměru 1 000×1 000mm až po maximální velikost 2 500×3 000mm. Délky jednotlivých prvků jsou 500, 1 000, 1 500 a 2 000mm. Ukončení propustků je provedeno pomocí vtokových a vý-

tokových dílců, které mohou být kolmé nebo šikmé se sklonem 1 : 2,5, přičemž čelo je hladce upraveno. Statické navržení umožňuje použití těchto propustků v silniční dopravě. Rámové propustky jsou vyráběny se spojením hrdlo-dřík, přičemž po aplikaci pryžového klínového těsnění na dřík vzniká vodotěsný spoj, čímž je zajištěna vodotěsnost celého systému propustku.

# BEST.

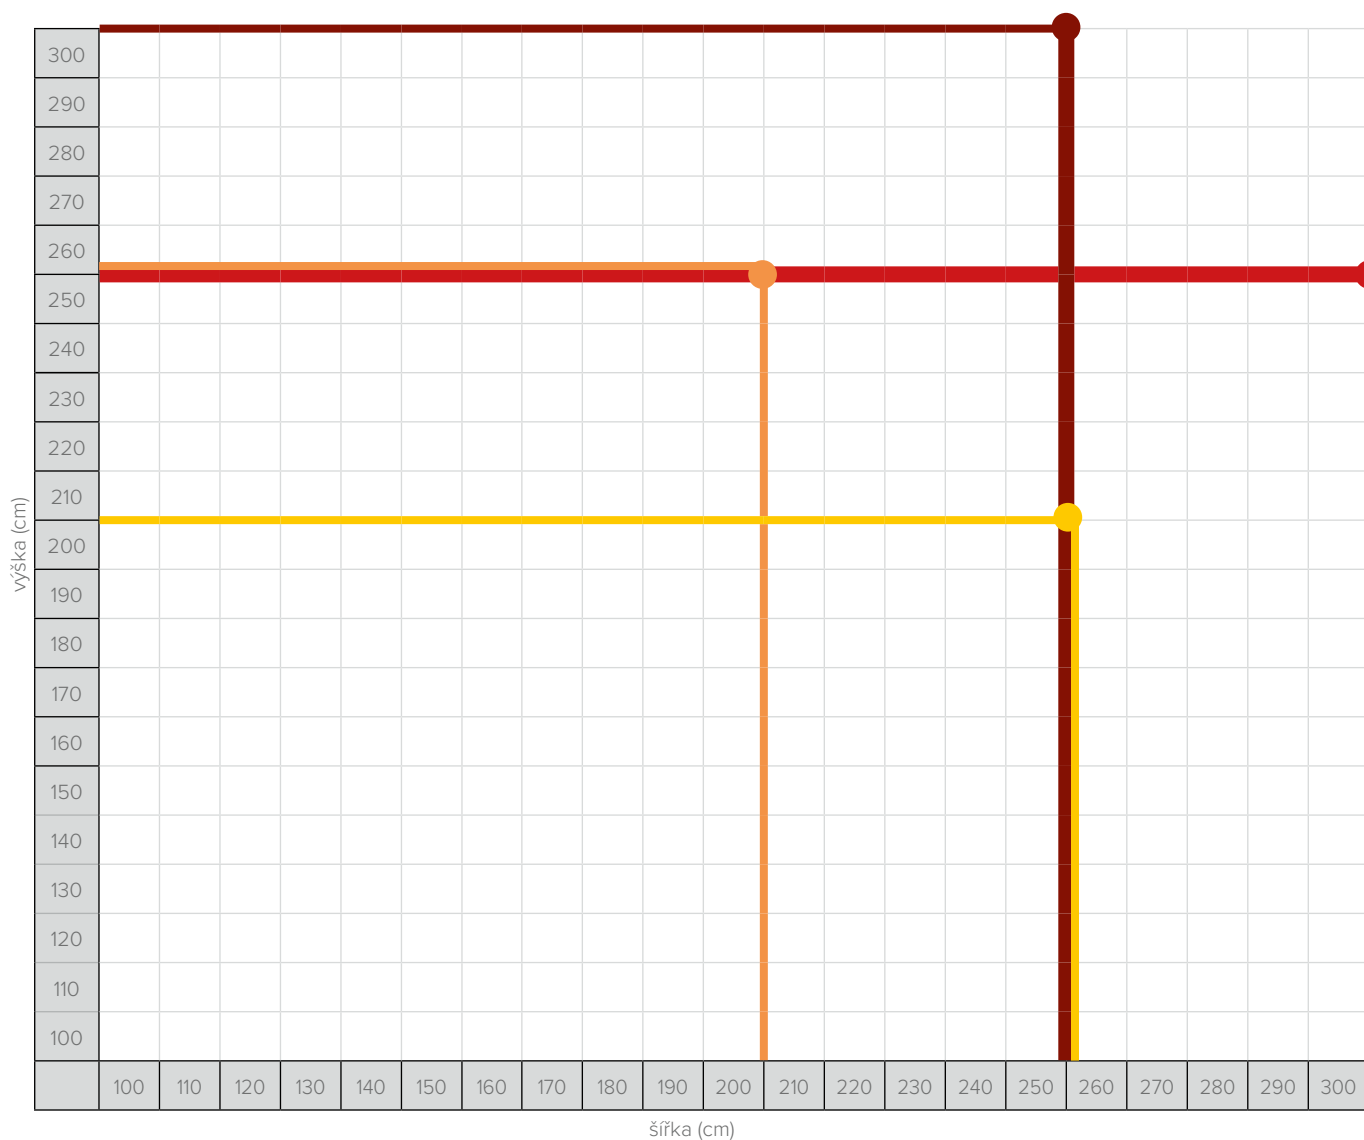

## RÁMOVÉ PROPUSTI SILNIČNÍ

### ROZMĚROVÉ VARIANTY SILNIČNÍCH RÁMOVÝCH PROPUSTÍ

Rámové propusti pro silniční využití jsou dostupné v celé škále rozměrových variant, a to v modulech po 10cm až do velikosti 3×2,5m nebo 2,5×3m.
